

"I was fortunate enough to have the opportunity to subcontract AAA OSHA Training & Safety Consultants, Inc. as my on-site Safety Director for a project Daw Tech was awarded in New York. The project was on the campus of SUNY Polytechnic University. The consultant on our site operated in a completely professional manner for our company helping keep our perfect safety record intact.

The scope of work AAA OSHA Training & Safety Consultants, Inc. performed for Daw Tech on the SUNY Polytechnic site are listed below:

Upfront organization of necessary paperwork required by both the GC and Daw Tech.

Dissemination of forms, PTP's, SBO's, JHA's, Tool box talks, etc. to the men on a daily and/or weekly basis to be completed, documented and returned to the required person(s) and files for record keeping.

AAA's Safety Director led morning stretch and flex for our crew along with Daw Tech supervision, getting a quick look at the men just to make sure they were ready to work. Assignment of safety tools, i.e. body harness', lanyards, tie off points etc. based on the task that personnel had been assigned. AAA also inspected all of the safety equipment regularly,

sometimes daily if necessary, and kept running spreadsheets of inspections both for our company record and those that the GC required to be forwarded to them.

On the site all day watching and helping anyone that needed advice or assistance. We operated in a congested area requiring many eyes to coordinate productive movement of men, equipment and material without any close calls, professional eyes watching workers to watch out for each other.

Our site, SUNY Polytechnic, was paperwork heavy. AAA had a significant role keeping all of our paperwork up to date. From date of hire every employee of Daw Tech had to provide/maintain and/or update specific training requirements. With AAA's professional knowledge of the requirement and my staffs training and experience this process went very smoothly.

My staff also used AAA to assist in creation of Job Hazard Analysis (JHA) paper work. JHA's are a coordinated effort between supervision who has the responsibility to get the work done and safety who's responsibility is provide any training and equipment to insure our workers safety. This always had a positive outcome due to the input from all.

In closing I would absolutely hope to use AAA OSHA Training & Safety Consultants, Inc. on future projects and would certainly recommend them to any contractor that would care to inquire."
